Shropshire Business Awards 2009
Celebration of excellence
Winner - Company of the Year 2009

SP Holding was established in 1985 by Steve Holding. In the early days, the company carried out spot hire with one tractor and several bowzers, for the building and agricultural industries. This quickly flourished and he developed other aspects of the business, including tankering, transport services, drainage work and plant hire.

Today, the company has developed into a major utility and industrial support unit, working with many blue chip companies within the water, construction and industrial sectors.

As the company has grown into the large company it is today, it has always maintained the 'family-run' approach it did on day one, with Steve and wife Tracey taking an active approach in the day-to-day running of the business to ensure the same high levels of customer service are maintained.

Thanks to the efforts of Steve, Tracey and the staff at SP Holding Group, the company was named Company of the Year at the Shropshire Business Awards 2009.

POLICIES & PROCESSES

QUALITY & CONTINUOUS IMPROVEMENT

SP Holding Group has achieved certification under the ISO 9001 quality system that independently audits the processes and procedures in place within the company to recognised international standards. The goals and measures put in place are designed to ensure ongoing improvements by a process of target setting and measuring performance across a range of systems.

HEALTH & SAFETY

The management of SP Holding Group looks upon the promotion of health and safety measures as being of paramount importance to all members of staff, both office-based and operational. It is our policy to do all that is

necessary to prevent personal injury to our employees, sub-contractors, the general public or any other persons coming into contact with the company or its activities.

ENVIRONMENTAL ISSUES

At present, the company has in place procedures for certification to ISO 14001, as an environmental management standard, and a final external audit is programmed in the near future. All operations are carried out in compliance with all relevant environmental legislation and to the highest possible standards. This is particularly important with work such as carrying out clean-ups after pollution incidents.

[CONTENTS](#) 

With a modern fleet of rigid and articulated tankers with capacities of 1000 gallons up to 6000 gallons, we are able to offer a wide range of tankering services to agricultural and industrial companies.

SEPTIC TANKS

For new installations SP Holding can carry out porosity tests and complete the full installation. We can also empty, service and repair all types of septic tanks and drainage systems, for both commercial and residential customers. Our highly experienced team are on call 24 hours a day for emergency situations.

INDUSTRIAL SLUDGE REMOVAL

We are able to offer a comprehensive sludge removal service to industrial companies nationwide. We can remove hazardous and non-hazardous sludge that is either in liquid or solidified form from a wide range of applications, such as reservoirs and tanks.

INTERCEPTORS

SP Holding provides an emptying and disposal service using our high specification vehicles and a team of experienced and fully qualified operatives to ensure that every job is completed quickly and safely. All waste removed from the interceptor is transferred by SP Holding to a treatment plant for safe disposal. We are a registered waste carrier and upon completion of the job, we will leave you with a certificate confirming that the waste has been removed in accordance with current legislation.

POTABLE WATER

Our range of potable water tanks can be used for movement of clean drinking water between water authority depots to reservoir sites as well as to sites where burst water mains and other interruptions to mains supply have occurred. We are able to supply tanks from towable 200 gallon capacities up to 6000 gallon articulated water tanks and 4000 gallon demountable water tanks.

ADR SPECIALIST WASTE

Dealing with hazardous waste is one of the most regulated sectors involved in the waste management industry. SP Holding can help in this area, from offering advice to ensure that you are compliant with legislation, through to collecting and disposing of the waste on your behalf.

JETTING SERVICES

SP Holding provides a 24/7, 365 days a year incident centre for sewer blockage clearance, sewer cleansing, CCTV pipe surveys, waste water tankering, root cutting and man entry services.

Our commercial sewer (or waste water) jetting and cleansing service is the cornerstone of our business, which is reflected in the wide range of equipment SP Holding operates, including van pack jetting units through to high volume vector units.

This enables us to jet all shapes and sizes of drains, sewers and pumping stations and to cleanse some of the most difficult, deep and complex structures and sewage treatment works in the UK. With our larger vector units we are also able to carry out root cutting from 150mm up to 750mm diameter.

All of our operatives are highly trained to carry out man entry procedures to cleanse and maintain pumping stations, underground storm tanks and valve chambers. We also have staff who are trained in using breathing apparatus for confined space working in an irrespirable atmosphere.

With our off-road equipment, there is no sewer that we are unable to reach. We are able to mobilise all of our units quickly in response to emergency situations, with custom-built trailers for the tracked vehicles.

TRAC VAC

Both of our Trac Vacs – or off-road vacuors – were designed and developed in-house in response to a growing customer need for low ground compaction. These units enable us to negotiate even the softest of ground conditions, with minimal damage caused.

AGRI-VAC

Where conditions are slightly more favourable, but it is still difficult to get road vacuors near, the Agri-Vac offers a self-contained solution. Pulled by a JCB Fastrac, this combination is quick to deploy and can be on site faster than other agricultural vehicles.

TRAC CAM

Our Trac Cam can back up both of these vehicles to check on cleansing progress and provide a full Wincan report, once the job has been completed.

CCTV SURVEYS

Using the latest CCTV technology, any problems unseen from ground level can be detected and located with minimal disruption to the surface. We use a variety of camera units to provide detailed footage in DVD format. We also have Sounding equipment and use die tracing for locating purposes.

We can reach any location using either our van pack or off-road CCTV Trac Cam unit. When it is necessary for the pipeline to be completely clear prior to pipe relining, we can combine our CCTV and van pack jetters to drive robotic precision cutters, capable of removing large roots and intruding connections.

Once the survey is complete, we provide a full detailed structural report on the latest Wincan software, with a DVD of the survey, so that clients are able to see whether any remedial work needs to be carried out. If this is the case, then SP Holding is able to offer a competitive quote.

All of our operators are trained and assessed by WITA (Water Industry Training Association).

MANHOLE REHABILITATION

SP Holding delivers innovative solutions to manhole chamber renovation, utilising 'M Coating'; a cementitious spray-applied lining to provide a leak tight anti-corrosion barrier.

For the renovation of corroded and/or leaking manhole chambers with ERELIT dry mortar, M Coating is a new, innovative renovation process for both circular and rectangular chambers, ranging from DN500 to DN3000.

The M Coating automated system removes many of the sources of error in substrate preparation and the subsequent coating process, and benefits from over 25 years of research and development in Continental Europe.

The centrifugal spray technique means that chambers up to 25 metres deep can be coated to any desired thickness.

For more information on M Coating and how the process works, contact the team at SP Holding.

PIPE RELINING

CIPP (Cured in Place Pipe) linings account for the vast majority of repairs to sewer systems, particularly in areas where it is essential to keep disruption to a minimum.

The practice of UV light cured CIPP lining has become an extremely popular repair method over recent years, becoming the preferred choice for sewer lining due to the environmental benefits offered by the technique. The UV light curing process eliminates the styrene emissions found in conventional curing techniques.

The process can be utilised in any situation including domestic, commercial and industrial applications and can be used to repair any length of pipework.

Suitable applications for CIPP lining:

- Structural repairs to foul and storm drainage
- Repair of stack pipes
- Sealing of leaking joints
- Prevention of root infestation
- Capping off redundant connections
- Prevention of chemical erosion to pipework

SP Holding are committed to using new technology wherever possible and are continually working on developments in lining techniques to enable us to provide our clients with the most suitable solution to their needs.

SP Holding offers a complete steel fabrication service on site, which includes the design and manufacture of products to your specific requirements.

The fabrication workshop has the capacity for cutting and welding all types of ferrous and non-ferrous materials. This, combined with a wide range of machinery including a programmable band saw, three metre guillotine, press brake and full drilling capability, ensures the workshop has all the facilities to fulfil any fabrication requirement. We are also able to offer bespoke laser-cut lettering and logos/crests to personalise items to your requirements, as well as a powder-coating service dependent on the size of the item.

Typical projects include trailer fabrication, stairs and elevated walkways, as well as fire escapes and a range of litter bins. A wide range of park furniture including benches, picnic tables and gates (all available with disabled access) can also be offered. Our largest contract to date has been with Telford and Wrekin Council, having supplied over 1,000 vandal proof bins in and around the town.

All items are manufactured to a high standard and finished as specified by the client, by a team of experienced and skilled fabricators, who will be pleased to discuss your project from design through to delivery.

HAULAGE

SP Holding can provide the complete haulage service to customers nationwide using our modern fleet of 11 rigid and articulated vehicles, which can transport a wide range of loads ranging from 7.5 tonnes up to 80 tonnes.

Our vehicles are equipped with cranes with capacities from 4 tonnes up to 12 tonnes lift and extendable semi-low loaders from 13.6m to 20m in length, all of which have winches.

This enables us to cope with heavy and abnormal loads and also allows for the positioning of plant into awkward locations. All of our cranes are tested on an

annual basis and our slings and chains are correctly certificated at 6-12 month intervals or as required. All of our drivers/operators have crane licences.

Our trailers can also be equipped with railway tracks for specialist movement of trains and carriages, proving that we can really move almost anything. We can offer a full movement package, having at our disposal a range of mobile cranes and telehandlers. Where needed, we are able to offer a risk assessment, method statement and abnormal load movements. For the movement of larger or more specialist loads, we are able (subject to location) to offer a full job assessment, including site visit.

Originally built and equipped for our own fleet of vehicles, our on-site workshop is now available to private companies, having already carried out work for local and national haulage companies including Veolia, R L Holding and Foxies Transport.

Our fully spec'd workshop offers the following:

- ▲ Large pit
- ▲ Four post lift ramps
- ▲ Brake tester
- ▲ Laser headlight setting equipment
- ▲ Availability for PMI (Preventative Maintenance Inspections)
- ▲ VOSA test preparation
- ▲ Steam cleaning facilities

The workshop is open 7am-7pm, Monday to Friday, and from 7am-1pm on Saturdays.

However, we do also offer a 24 hour call out service via our team of five qualified technicians who have experience with Volvo, Scania and Man, using our fully equipped roadside assistance vans.

PLANT HIRE

PLANT HIRE

Our plant hire division offers a complete hire package, including delivery, if required. We offer a wide variety of vehicles and equipment, from diggers to dumpers through to groundcare equipment. We also have a range of trailers (suitable for cars or up to 3 tonne mini-diggers), various small tools including Stihl saws, wacker plates and floor saws. Delivery is guaranteed for 8am the next day within Telford if ordered before 3pm. For full and current availability, check our website www.spholding.co.uk or call us on 01952 501155.

TELEHANDLERS

We have various telehandlers available to hire, from a 4m low height clearance up to a 14m telescopic load-all. We have forks, buckets and

grab attachments available for all machines. Our Dieci Pegasus is a 21m telehandler, which converts to a 360 degree crane with powered winch and a 360 degree cherry picker, making it a highly versatile machine.

TRACKED DUMPERS

Where work needs to be carried out with minimal surface damage, tracked dumpers are an excellent solution. They create a low ground pressure and so cause less damage to the ground on which they work.

We are able to supply tracked dumpers with carrying capacities from 0.5 tonnes up to 11 tonnes.

PUMPS & GENERATORS

We have a wide range of diesel powered pumps able to cope with large volumes of water with high flow rates, including the following sizes:

- ▲ 3" high head
- ▲ 4" pump
- ▲ 6" pump
- ▲ 6x8 pump

We also have generators available from 3KVA up to 55KVA.

GROUND CARE

SP Holding can offer various pieces of equipment for hire to the landscaping and groundcare sector.

Our GreenMech 6" Eco-Arborist wood chipping machine is currently available for easy and safe disposal of waste wood. With its 50hp diesel engine, it is reliable and has a 1600rpm rotor speed, which makes it a quick working machine.

Other equipment available includes ride-on mowers, walk behind mowers, a compact tractor mower, chainsaw, bush cutter and paddock mower collector with high tip.

SALES

We also have a large range of trucks and plant available for sale. For a full, up to date list of current availability, images and pricing, visit our website at www.spholding.co.uk

PORTABLE TOILET & SHOWER HIRE

Our events team are able to offer the following services, including delivery and set-up, for all types and sizes of events, having done so for the V Festival, Big Chill, West Mid Show and Notting Hill Carnival in recent years:

- Portable and luxury toilets
- Portable showers
- Accommodation
- Full on-site plumbing services

DRINKING WATER

Our water bowzers are available in a range of sizes – from 1000 litres to 30,000 litres – and are suitable for both indoor and outdoor events. All units are fitted with taps for ease of use and can be delivered to and set up in any location in the country.

WASTE TANKERS & TANKS

Our up to date fleet of waste tankers can carry out services, such as transfer and disposal of food and beverage waste, to help your event to run as smoothly as possible.

Waste holding tanks are an excellent temporary effluent waste storage solution; easily buried or sited underneath toilet blocks, kitchens, canteens and welfare units, where there is no mains drainage. Units are available in a wide range of sizes and our fabrication department is able to produce high quality tanks to your specific requirements.

TEMPORARY ROADS

If your event is being held on difficult terrain, as is often the case, temporary roadways manufactured by Sommerfeld are a cost-effective and environmentally-friendly solution. Our team can quickly set up a firm and safe temporary surface, which can then be easily dismantled at the end of the event – leaving the ground as you found it.

Our temporary roadways provide:

- Protection for the ground
- Solutions for disabled access
- Flooring for temporary structures
- Temporary parking areas

BUGGY HIRE

Some events cover vast areas, so take advantage of our 6x6 and 4x4 buggy hire to quickly and efficiently transport personnel and equipment throughout the event site.

We have a range of buggies available to suit your needs and budget and are able to deliver and collect from site as agreed.

CONSTRUCTION INDUSTRY

We are able to supply a range of construction site welfare solutions including vans for transportation that incorporate toilet and wash facilities as well as seating and food making facilities. We can also supply water bowzers and flat bed tanks.

RESIDENTIAL SERVICES

In addition to the wide range of services on offer to commercial customers, SP Holding has been operating services to residential customers for many years, using many of the techniques, equipment and technology available to the commercial sector.

Our 24/7 emergency service is just a call away, giving homeowners peace of mind that any problems at their property can be solved by a local, professional team in time to minimise damage, flooding or pollution.

With our close links with local water authorities, we are able to cover a wide area and respond to situations across the Midlands and into Mid Wales.

SEPTIC TANKS

For residential properties that are not connected to the mains sewage pipes, septic tanks provide an onsite sewerage facility.

Our experienced and fully qualified team can install full septic systems. We can also provide an ongoing maintenance and repair service, including porosity tests, pumping plants and soakaways.

HOME BUYERS REPORTS

The purchase of a home is one of the most important and costly, so to protect this investment SP Holding are now able to offer a Home Buyers Drainage Report. This service includes jetting of the drains to remove silt, debris and grease ensuring that they are clean before a full CCTV drain survey is carried out.

The camera will identify any cracks, displaced joints, roots or collapse within the pipe work. If we do identify a problem we can quickly advise the best and most cost effective solution.

DRAIN JETTING/UNBLOCKING

Our compact van pack jetting units are on call 24/7, and can be on site quickly to assist with blocked drains at residential properties.

We can also provide a drain jetting service to clean and maintain a fully functional drainage system.
